Kenedy Texas Emergency Response
7/3/2018

On 7/3/2018 EPA and START continued air monitoring operations around Country Village of Kenedy Apartments and Kenedy Suites Apartments. The Apartments are located just to the North and North West of the Newpark Drilling Fluids facility and Freeny Drive. There were not any abnormal or high reading observed on EPA/START air monitoring equipment. EPA and START observed soil removal/remediation actions taking place from the fire water pathways located on the east side of Newparks facility located next to US-181. EPA and START also observed the installation of two underflow dams in the pathway of the firewater runoff. There will be a total of 4 underflow dams installed in the water runoff pathway. The underflow dams are being installed in strategic locations to prevent the entry of contaminants within the firewater runoff into Escondido Creek. The local fire departments are still in the process of having the fire 100% suppressed.

I will update the website with todays activities.

Bradley White
Ambient Air Quality and Emissions /Project Leader
